

Java Script Full Stack Experts

Course 4579 – 130 Hours

Overview:

These days, web based services tend to be more atomic, focused and intensively released. These characteristics forces a new generation of Web Developers that are familiar with the different wide aspects of a web software development. These aspects include 3 basic tiers (Front-end, Backend & Integration), the preferred technologies and best practices for each tier, the related configuration & basic administration and the understanding of each tier role & responsibility. This wide knowledge is what gives a developer the ability to rapidly update / change / develop feature for intensive releases – Full Stack Developer.

Java Script became a very popular solution for Full Stack Web Developers. There are several reason for it:

- Very effective server side framework and technologies lately appeared
- High performance of implemented web modules and web services in Java Script
- Availability of a server-side solution since it is based on a popular client-side language
- Mature of Client-MVC oriented frameworks
- Rich set of libraries for any kind of view and graphics
- Usage of Java Script in Single Page Applications
- JSON popularity as a self-descriptive text based protocol

On Completion, delegates will be able to:

Develop rich high strands, component based, full stack web applications.

Will have deep knowledge of latest JS technologies both for client and server side.

Target Audience:

Experienced developers who aim to learn the latest JS and web based technologies.

Pre-requisites:

- Rich Experience in Web Based Technologies such as HTML, CSS
- Rich experience with Java Script fundamentals
- Experience with JavaScript OOP
- Understanding of HTTP and AJAX

Course duration:

- 130 academic hours
- Lessons twice a week, between 17:30-21:45
- Studies will not take place on holidays. Recent vacations panel will be distributed to students

Certificate of Completion:

In order to be eligible for a course certificate participants have to meet the following requirements:

- Presence in 85% of the sessions at least

Course Contents:

Module Title	Hours
Advanced Java Script	20
Advanced CSS	15
REST Web Services	5
React.JS	50
Node.js & Express	40
Total	130

Module Title	Module Description
Advanced Java Script	
JavaScript Pitfalls	<ul style="list-style-type: none"> ▪ typeof operator ▪ Undeclared vs. Uninitialized variable ▪ Implicit Variable declaration ▪ No integral data type ▪ String is immutable ▪ Undefined value ▪ Strict vs. Abstract comparison ▪ Logical Operator ▪ Array is dynamic ▪ Don't mix object with array ▪ Where to declare variables inside function? ▪ Function overloading ▪ Function is an object ▪ Function.apply vs. Function.call ▪ Function creates scope ▪ Closure ▪ Self-executing function
Object Oriented JavaScript	<ul style="list-style-type: none"> ▪ Module Pattern ▪ From Module to Class ▪ Function as Constructor ▪ Prototype ▪ Inheritance ▪ Namespace ▪ Objects and DOM ▪ me, self and that
ECMA Script 5.0 & 6.0	<ul style="list-style-type: none"> ▪ Strict Mode ▪ Object.create ▪ Getters and Setters ▪ Reflection ▪ let ▪ Class

Module Title	Module Description
	<ul style="list-style-type: none"> Module Iterator Generator Arrow function Binary data Collections Proxy Promise
jQuery	<ul style="list-style-type: none"> jQuery Library Introduction jQuery basics – document ready, callback functions jQuery structure and components jQuery Selectors Traversing document elements Modifying CSS attributes Binding and unbinding events Using jQuery's AJAX Features jQuery Extensions (Plugins) jQuery UI plugin library Writing your own custom jQuery plugin
AJAX	<ul style="list-style-type: none"> Why do we need it? XMLHttpRequest \$.ajax AJAX Threading Model JSON JSONP
Advanced CSS	
Foundation	<ul style="list-style-type: none"> Introduction Grid and layouts Fast prototyping Interactivity with Java Script Components
Bootstrap	<ul style="list-style-type: none"> Obtaining and Using Bootstrap Bootstrap Grid System CSS Techniques with Bootstrap Typography - fonts and icons Tables Forms
Introduction to SaSS	<ul style="list-style-type: none"> Nested Selectors Parent References Properties Processing SASS Examining Output SASS Variables Using SASS to strip the unavoidable repetition from your CSS Creating and Referencing SASS Variables Variable scope usable SASS programing with Mixin CSS Rules and Mixin Mixin parameters

Module Title	Module Description
REST Web Services	
REST	<ul style="list-style-type: none"> ▪ Introduction ▪ RPC ▪ HTTP Based Integration ▪ REST API ▪ RESTful ▪ Relevance for SPA and future internet clients
React.js	
Introduction to React.js	<ul style="list-style-type: none"> ▪ Github links for React libraries ▪ Environment setup ▪ Project setup ▪ Basic concepts and terms ▪ Most basic components ▪ The virtual DOM ▪ Introduction to React.js event model
React components	<ul style="list-style-type: none"> ▪ Basic components ▪ Components structure ▪ Passing properties ▪ Managing component state ▪ Using references ▪ Pure components
Redux & React	<ul style="list-style-type: none"> ▪ FLUX architecture ▪ Introduction to Redux <ul style="list-style-type: none"> ○ Redux actions ○ Redux reducers ○ Redux store ○ Redux middleware ▪ Combined with React <ul style="list-style-type: none"> ○ Use store with React ○ Using reducers and actions to manage component state
React routing	<ul style="list-style-type: none"> ▪ React router ▪ Single routes ▪ Multiple routes
Advanced Redux - Middleware	<ul style="list-style-type: none"> ▪ Async Actions ▪ Logging ▪ Crash reporting
Advanced React	<ul style="list-style-type: none"> ▪ Project structure ▪ Some selected open-source supportive libraries ▪ Best practices
Node.js & Express	
Introduction to Node.js	<ul style="list-style-type: none"> ▪ What is Node and what is it not ▪ Node.js Features ▪ Our first Node.js script: Hello World ▪ Hello Server: Building a web server in Node.js ▪ Debugging node applications
Building your Stack	<ul style="list-style-type: none"> ▪ Pulling in other libraries ▪ Building custom libraries ▪ Asynchronicity and callbacks ▪ Blocking vs. non-blocking I/O ▪ Working within the event loop

Module Title	Module Description
Modular JavaScript with Node.js	<ul style="list-style-type: none"> ▪ Writing Modular JavaScript with Node.js ▪ Core Modules ▪ Installing Packages ▪ Publishing packages
Avoiding common pitfalls with Async.js	<ul style="list-style-type: none"> ▪ Introducing the Async problem ▪ Async.js Library to the rescue ▪ Collections ▪ Flow Controllers
Working with the file system	<ul style="list-style-type: none"> ▪ Sync and Async operations ▪ Files manipulations ▪ Folder manipulations ▪ Putting the file-system module together Async.js
Data Access 01 – MySQL	<ul style="list-style-type: none"> ▪ Installing MySQL node package ▪ Simple db connection ▪ CRUD example ▪ Putting together Async with MySQL operations
Command-line interfaces	<ul style="list-style-type: none"> ▪ The built-in REPL ▪ Custom REPL ▪ Using external libraries ▪ Receive command-line arguments ▪ Build command-line tools
Unit-Testing Node Applications	<ul style="list-style-type: none"> ▪ Introduction to unit testing ▪ Testing with Mocha and Should ▪ Suits, specs & Reporters ▪ Testing Synchronous code ▪ Testing Asynchronous code
Building Web applications with the Express Framework	<ul style="list-style-type: none"> ▪ Introduction to Express, installation and basic setup ▪ Application configuration ▪ Routing ▪ Views and Templating options ▪ Persistence with Cookies, In-Memory Sessions and session-stores. ▪ Authenticating users with passport local ▪ Social Auth with Passport.js
Data Access 02 – mongo DB	<ul style="list-style-type: none"> ▪ Tooling up – installing mongo, clients and drivers. ▪ Mongoose Schemas ▪ CRUD operations ▪ Single Page Applications with Express, Mongoose and Angular.js
Real-time communication	<ul style="list-style-type: none"> ▪ Introduction to real-time applications ▪ Listen & emit ▪ Readable streams – streaming chunked data ▪ Piping Readable streams to Writable streams ▪ Sockets on the Server and the Client ▪ Build a chat application
Services, Observers and the RxJS library	<ul style="list-style-type: none"> ▪ Understanding Reactive Programing ▪ Working with the RxJS library ▪ Working with data Observables ▪ Promises vs. Observables ▪ Implementing custom services
